

Pythian's Security Health Check for Google Workspace

Reduce risk and protect your data

Cyber threats are evolving at a rapid pace, thanks to the proliferation of artificial intelligence. For security teams, it's increasingly difficult to keep up with the constant onslaught of new threats as attackers use AI to automate and accelerate sophisticated, hard-to-detect attacks.

It takes an average of [258 days to identify](#) and contain a data breach, according to the "Cost of a Data Breach Report 2024." Yet, the average total cost of a data breach in 2024 was \$4.88 million—a 10% increase from the previous year.

While productivity suites like Google Workspace come with a wide array of built-in security features, many organizations aren't taking advantage of those features. If you're new to Google Workspace, or you're looking to baseline your organization's Google Workspace settings, Pythian can help.

Pythian's Security Health Check

With Pythian's Security Health Check for Google Workspace, you'll benefit from a custom assessment of your organization's Workspace environment, leveraging the security expertise of a proven premier Google Cloud Partner.

This assessment will help your organization reduce risk and better protect users and company data, providing customized remediation and recommendations to secure your organization's Workspace environment.

Do you have a lot of data and need a deeper dive into your security posture? Pythian's Security Posture Analysis for Google Workspace is an 8 to 10-week engagement that will help your organization understand and mitigate your risk exposures.

Highlights

- Pythian's Security Health Check helps identify vulnerabilities in your Google Workspace and provides tailored recommendations to better protect your data and users.
- Leverage Pythian's Google Cloud expertise for a comprehensive security assessment that goes beyond technical reviews, focusing on people and processes.
- Benefit from a review of your Google Workspace settings, participate in a risk workshop, and receive follow-up guidance to implement effective security improvement.
- Security configuration & recommendations reports delivered over 3 - 6 weeks.

How it works

1

Phase 1: Review of security settings

We'll conduct a fundamental review of your organization's current Google Workspace configurations and security settings to compile a list of improvements and remediation tactics to choose from.

2

Phase 2: Presentation of findings

Our team of experts will facilitate a workshop to present our findings and recommendations. This includes:

- Google Workspace core services (Drive, Gmail, Sites, Groups, etc.)
- Mobile device management
- Security and authentication
- Email security

3

Phase 3: Scheduled checkpoints

From there, we'll provide two consulting sessions to review configuration changes and provide guidance on our analysis, remediation, and recommendations.

Why Pythian?

Pythian goes beyond technical security reviews of Google Workspace, focusing on the human element and change management to ensure your data is protected through a people-first approach. We help your teams understand what was done and *why* it was done, empowering them for future success.

With Pythian, you can maximize your investment in Google Workspace by leveraging our long-established expertise. An award-winning Google Cloud MSP and Specialization Partner, we provide end-to-end services for all Google Cloud solutions, including Google Workspace.

Our proven delivery method has been used to support some of the world's largest, most complex companies—and we can do the same for you.

Get started with Pythian

Getting the most out of Google Workspace often requires a partner by your side. [Contact us](#) to find out how we can help you secure your Workspace environment and get the most out of your productivity tools.

About Pythian

Founded in 1997, Pythian is a data and analytics services company that helps organizations transform how they compete and win by helping them turn data into valuable insights, predictions, and products. From cloud automation to machine learning, Pythian designs, implements, and supports customized solutions to the toughest data challenges.
