Pythian's Security Posture Analysis for Google Workspace

Keep up with the pace of cyber threats

With the rapid rise of AI, the cyber threat landscape is quickly evolving. And it's being shaped by increasingly sophisticated attacks, with ransomware, social engineering, and AI-powered cybercrime remaining top concerns, according to the World Economic Forum's latest Global Cybersecurity Outlook.

Data breaches are at historic levels, with 3,158 data compromises tracked by the Identity Theft Resource Center. These attacks have serious consequences, from financial losses to reputational damage. Indeed, 43% of organizations lost existing customers because of cyberattacks, according to the "Hiscox Cyber Readiness Report 2024."

While Google Workspace has a strong suite of security features, do you know if you're taking advantage of all of those features? Are they configured properly? Or are there holes in security that you aren't aware of? While cyber threats are evolving, many of them are preventable. That's where Pythian can help, especially if your team is new to Google Workspace.

Pythian's Security Posture Analysis

With Pythian's Security Posture Analysis for Google Workspace, your organization will gain a better understanding of your risk exposures, so you can take the measures to protect your users and secure company data. Our Security Posture Analysis is based on our team's collective 75+ years of experience in deploying and managing Google Workspace.

Pythian's Google Workspace Security Posture Analysis is an 8 to 10-week engagement, depending on the size of your organization.

Highlights

- Pythian's Security Posture Analysis provides your organization with a deep understanding of your risk exposures, enabling you to take proactive measures to protect users and secure company data.

- This 8-10 week engagement delivers a detailed configuration report of over 900+ settings, risk mitigation workshops, and a detailed report tailored for C-Suite executives.

- Pythian goes beyond technical reviews, focusing on the human element and change management to empower your teams and ensure your data is protected through a people-first approach.

New to Google Workspace and not ready for a full Security Posture Analysis? Get started with Pythian's Google Workspace Security Health Check, a great way to baseline your organization's Google Workspace settings.

love your data

How it works

1

Phase 1: Analysis of security settings

We'll start by documenting your organization's existing Google Workspace security settings in a configuration record report along with our security evaluations and recommendations.

This in-depth, detailed report will cover 900+ security settings, including:

- Google Workspace core services (Drive, Gmail, Sites, Groups, etc.), including sharing policies and group management
- Identity and authentication, including user management

- Security policies, including data loss prevention, retention policies, and access privileges
- Endpoint management
- Email security

2

Phase 2: Risk mitigation recommendations

We'll provide your teams with detailed reports and analysis on all critical data within Google Workspace. We'll collaborate with your teams through a series of workshops to review the analysis, risk exposures, and recommended risk management tactics specific to your organization. This phase will focus on correlating the data with the Google Workspace security settings in the previous phase.

3

Phase 3: Detailed executive report

We'll then provide a report targeted at your C-Suite executives detailing our findings and recommendations.

Why Pythian?

Pythian goes beyond technical security reviews of Google Workspace, focusing on the human element and change management to ensure your data is protected through a people-first approach. We help your teams understand what was done and *why* it was done, empowering them for future success.

With Pythian, you can maximize your investment in Google Workspace by leveraging our long-established expertise. An award-winning Google Cloud MSP and Specialization Partner, we provide end-to-end services for all Google Cloud solutions, including Google Workspace.

Our proven delivery method has been used to support some of the world's largest, most complex companies—and we can do the same for you.
